

BIOWERX

Odor Control & Waste Digester

Active Odor Control

BioWerX is a proprietary blend of “living” microbial spores that produce enzymes to digest organic and nonorganic waste. The multiple strains of highly concentrated microbe spores are dormant until activated in average-pH water. Once activated, they efficiently liquefy waste and eliminate odors in hot and cold temperatures.

Features

- ✓ All-natural bio-start food source for immediate spore activation
- ✓ Billions of natural proprietary living enzyme-producing microbe spores per ounce Non-staining blue dye
- ✓ Fresh lemon scent

Benefits

- ✓ Efficient waste digestion for easier pumping
- ✓ Effectively eliminates odor sources for a more pleasant experience
- ✓ Eliminates unsightly piling/stacking in the tank
- ✓ 100% biodegradable

Two ounces of BioWerX contain 60 billion spores and a bio-start food source. When poured into water, the proprietary bio-start food source and average pH water activate the microbe spores and starts working immediately.

Why BioWerX

- ▶ They are “living” single-cell organisms that produce enzymes.
- ▶ They can identify complex organic waste (food sources) and produce the correct enzyme to break it down and its respective odors.
- ▶ The microbes will reproduce single-cell organisms to produce enzymes every 20 minutes until the food source is digested.
- ▶ Once digested, the remaining microbes return to a dormant “spore” stage until reactivated by waste.

Available Sizes

1-gallon jug (4 per/case)

5-gallon jug

55-gallon drum
